

energy supply system. This system can meet the fuel cell bus operation demand (950 MWh/year) *and* serve the local community as well.

- Taking 1304 \$US/kW as unit cost of wind power generation, 471 \$US/kW as unit cost of additional wind power equipment, with a 75-ton tower (\$US 1460/ton) and including all other equipment (electrolysis, hydrogen storage equipment, batteries, etc.), the total cost of the system is estimated to be 3.0 Million \$US.
