

Acknowledgements

The authors would like to acknowledge Sasol Technology, Research and Development in particular to Rudy Coetzer for processing the biomass samples and also for all the Koekebakker™ pyrolysis work, Ben Ashton for all the thermogravimetric analyses, Neil de Beer for all the gas analyses, Mariska Freyer and Michael Moeketsi for all the GCMS and GC-FID analyses, Rene Engelbrecht for all the simulated distillation analyses, Heinn Potgieter for the two-dimensional GCMS analyses and to Johan van Dyk and Daniel van Niekerk for the elaboration of the analytical report. The authors would like to acknowledge as well the Portuguese company YGE – Yser Green Energy SA, Portugal, that allowed the execution of the laboratory tests. The current study was funded in part by Fundação para a Ciência e Tecnologia (FCT), under project UID/EMS/00151/2013 C-MAST, with reference POCI-01-0145-FEDER-007718. J.P.S. Catalão acknowledges the support by FEDER funds through COMPETE 2020 and by Portuguese funds through FCT, under Projects SAICT-PAC/0004/2015 - POCI-01-0145-FEDER-016434, POCI-01-0145-FEDER-006961, UID/EEA/50014/2013, UID/CEC/50021/2013, and UID/EMS/00151/2013, and also funding from the EU 7th Framework Programme FP7/2007-2013 under GA no. 309048.
